PB NO.109
REV. 2

SUBJECT: Pilot Fuel Check Valve
Superior Clean Burn Engine
Part Number P-031-665-Y-1 Inline Engine
P-031-665-V Vee Engine

PURPOSE: To advise our customers of our NEW IMPROVED DESIGN pilot fuel check valve for Superior Clean Burn Engines.

The attached drawing reflects another improved design **PowerPart®**. **EnDyn** new pilot fuel double check valve has been installed in Superior Clean Burn Engines in excess of (12) months resulting in no downtime for removal and cleaning.

The male thread size is 7/8" X 14 and is interchangeable with your existing 7/8" check valve. The only required change is a slightly longer piece of tubing to the inlet connection (inline engines only).

In older engines utilizing the smaller 3/4" X 16 check valve, it will be necessary to rework your existing cylinder heads to accept the larger 7/8" check valve.

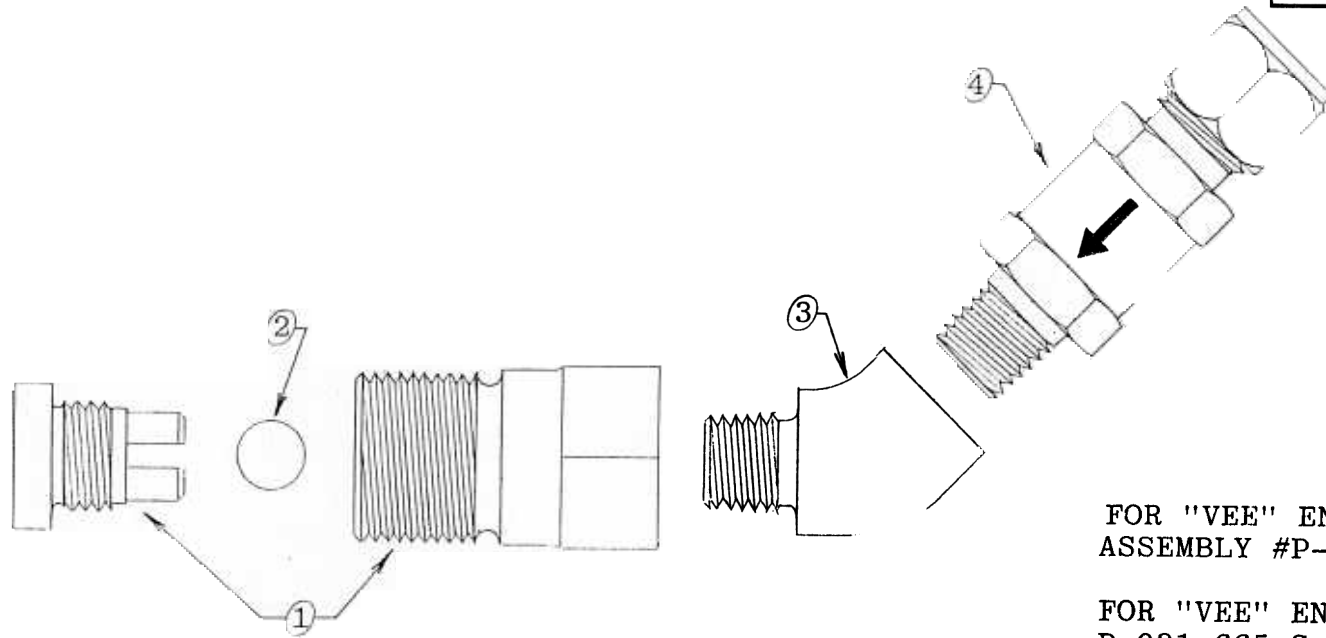

We also suggest that the combustion chambers be blown out after removal of the old check valve and prior to the installation of the new valve. This will remove any excess carbon stuck in the check valve passage way.

Our check valve is a stock item and can be shipped upon receipt of order. To place your order or if you have any questions contact **EnDyn** or your **EnDyn** Distributor.
