**Rev. 0**

**Subject: Upgraded VEE Engine Oil Filter System P-SPINON-8**

**Purpose:** Conversion of sock type filter system to spin-on filter system

The original Superior oil filter system has basically remained the same for years, there have been many improvements in filter design since the sock filters were implemented.

With the modern trend of extended service between oil changes brought on by improvements in oil manufacturing technology and engine analysis programs, an improved filter system is now available to further improve reliability and simplify the maintenance of Superior VEE Engines. The spin on filter system will allow faster and cleaner filter changes reducing engine down time and clean-up associated with routine maintenance. An additional benefit of the spin-on filters can be seen in reduced contaminants in the oil due to a more uniform and efficient filter media found in modern filters.

A complete kit has been developed to make the conversion as simple as possible. However, there will be some field work involved to mount the filter system in the most convenient location for each individual unit. The filter kit consists of the following components:

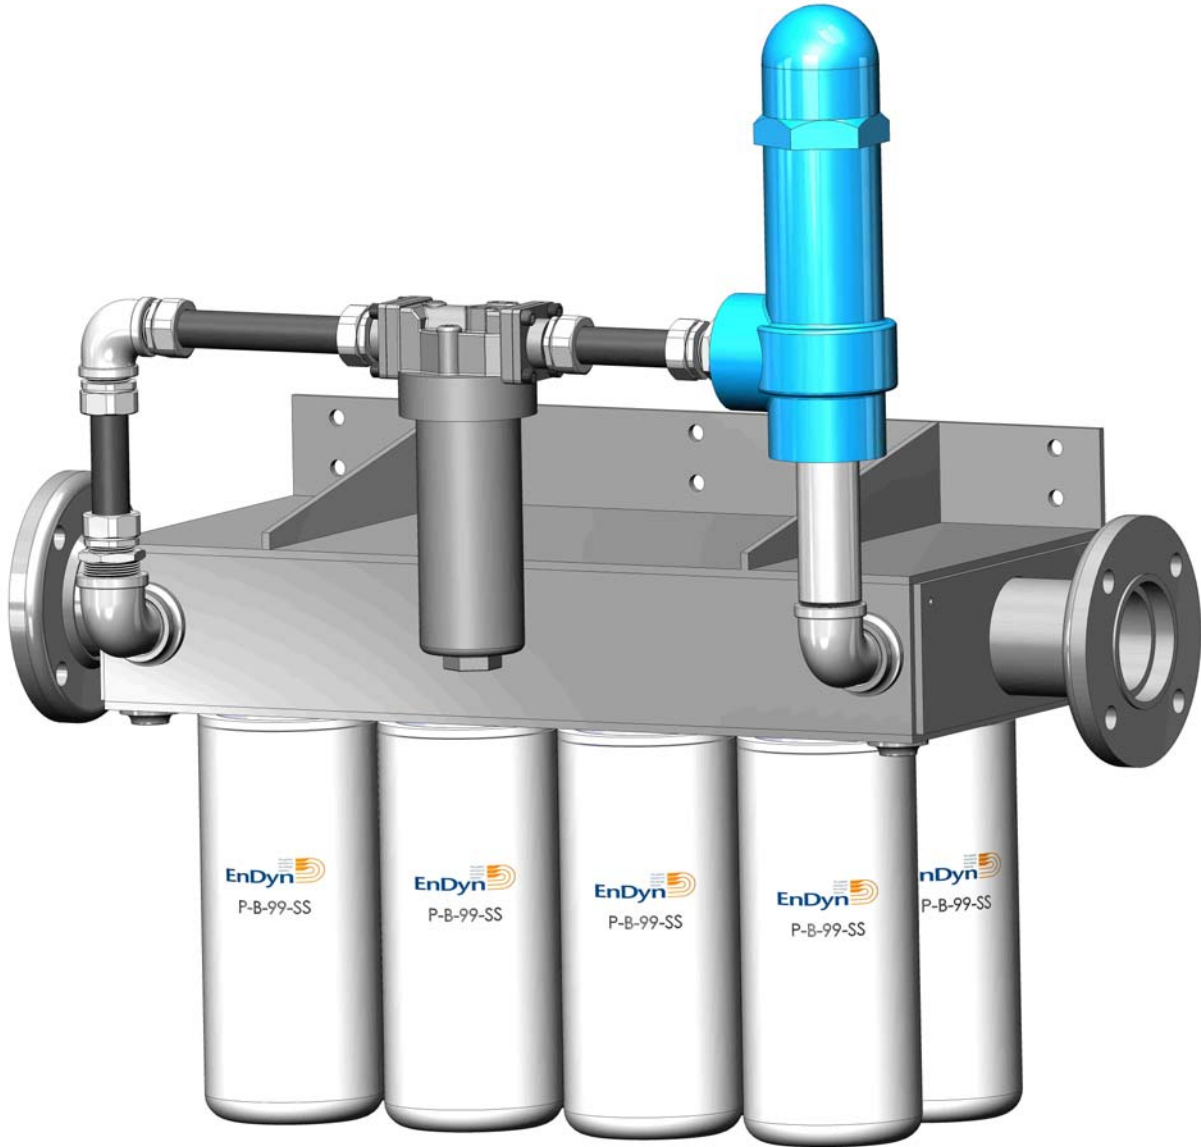

**KIT PART NUMBER: P-SPINON-8**

- (1) 8 filter manifold
- (1) Bypass relief valve
- (1) Bypass screen filter
- (1) Differential pressure gauge
- (8) P-B-99-SS spin-on filters
- misc. hardware for bypass and screen filter installation

Approximate assembly shipping weight (with filters): 205 pounds

Approximate dimensions of shipped assembly (with filters installed): 16.5in x 20in x 37in
